.SYNC Target Market

Primary Segment

- Young adults (18-30)
- Active lifestyle: gym, running, group classes
- Early adopters interested in new fitness technology

Attributes

- Highly engaged in wellness tracking
- Consistent buyers of premium athleisure
- Strong trust in Lululemon brand and community

Why They Fit

- Experience discomfort with bulky wearables
- Seek seamless, minimal designs
- Willing to switch if technology improves comfort, accuracy, or convenience
- High alignment with .SYNC apparel- integrated design

Our Market - Relevant Statistics

- Lululemon holds 21.2% of the U.S athleisure market- Strong brand trust among young adults
- Study on Lululemon customers found 71.5% were between 26-30 (Atlantis Press)
- 2023 Global Fitness Market valued at \$64.6 billion. Projected to grow to \$137.3 by 2030
- According to Grandview Research, the smart clothing segment is expected to witness the fast CAGR growth in the next few years
- A BCG report shows the activewear market growing 3–5% annually, driven by Gen Z and Millennials who see it as part of self-expression and wellness.

Persona: The Performance Optimizer

Amy Chen

Age: 25

Gender: Female

Location: Los Angeles, CA

Occupation: Marketing Analyst

Annual Income: \$120,000

Goal

- Maximize athletic output
 - Accurate data
 - Long battery Life
- Prioritize physical comfort
- Have a custom workout plan that works with her busy life

Values/Hobbies

Fitness

Time outdoors

Community

“I value when performance meets purpose - that’s what I look for”

“My priority when it comes to athleisure is comfort. I want something that allows me to run, hike, lift, and sweat in without worrying about the quality.

Persona: Tech Integrated Minimalist

Jake Thompson

Age: 22

Gender: Male

Location: NYC

Occupation: Financial

Analyst

Annual Salary: \$80,000

Goal

- Find and try new innovative technology that promises functionality
- Seeks for a functional and professional alternative to traditional fitness tech.

Values/Hobbies

Innovation

Marathon Training

Privacy + Integrity

“I use my fitness technology for running. I want an innovative design that doesn’t constantly distract me.”

“Life should be about simplicity. I don’t want to purchase excess products that do not provide me with any real benefits.”

Customer Profile

Jobs

- Track fitness accurately with seamless, daily-wear integration
- Feel comfortable, confident, and supported
- Look stylish/modern, stay connected to fitness communities

Pains

- Bulky, uncomfortable, short-battery wearables
- Inaccurate data and overly complex features
- High cost of current fitness tech

Gains

- Reliable, real-time tracking that fits effortlessly into daily life
- Stylish, comfortable, durable apparel
- Motivation from progress insights and community engagement

Value Map

Products & Services

- Lululemon .SYNC sensor-embedded clothing
- Lululemon .SYNC app with tracking, insights, coaching, and AI dashboard

Pain relievers

- Ultra-thin, stretchable sensors
- Accurate multi-point data
- One-week battery + fast charging technology

Gains creators

- Personalized apparel/app options with AI guidance
- Community motivation and connection
- Clear progress visualization
- Minimalist designs and comfortable, durable daily-wear materials

Hypothesis 1: Need for Increased Fitness Metrics

We asked: “What’s critical to get done in this market?”

Description provided: Clothing that tracks more advanced performance data

Ex. Our smart shorts measure real-time muscle activation for analyzing form and training efficiency

- 65% of participants expressed interest in having more detailed fitness metrics
- Users frequently compared devices like the Apple Watch, Fitbit, and Whoop

Hypothesis 2: Prioritizing Physical Comfort

We asked: “What are the greatest challenges or roadblocks in tracking your fitness?”

Early Findings (Interviews):

Overwhelming responses: “uncomfortable to wear,” “bulky,” and other athlete-related concerns

Multiple responses specifically stated they
“wanted it to disappear”

This reflected aesthetic comfort: the desire
to feel like yourself without the tech
interrupting your look

Survey Findings:

How much do you prioritize comfortable attire in your daily life?

 Copy chart

46 responses

How much do you prioritize comfortable attire while working out?

 Copy chart

46 responses

Sample size: 46

Why was this critical?

Different Contexts = Different Comfort Priorities

We needed to clearly distinguish where consumers prioritized comfort.

Comfort in Everyday Life:

- *Moderately* important (aesthetic and convenience-based).

Comfort During Workouts:

- *Very* important (physical fit, security, and a non-distracting feel)

Key finding:

Users value comfort in 2 dimensions, and with this insight, we can work to deliver both and increase the chance for product adoption

Hypothesis 3: Open to Switch

We asked: “Would you be interested in switching to our product with integrated tech?”

Early Findings (Interviews): Potential consumers expressed hesitation to switch without a clear visual for the product

Survey Findings: Included the napkin sketch to provide a visual

50% said “maybe” to switching.
Requested a visual

95% stated they’d consider switching after
being provided the napkin sketch

Critical Risk + Mitigation

Risk: Price + Switching Costs

- Many parts of our product - clothing, device, app
- Charges that come with switching from other fitness tech or first time purchase

Risk: Tech Durability

- Ensuring that both clothing and technology is durable and long-lasting

Risk: Accurate Fitness Metrics

- While the tech is recording a workout, ensuring that the metrics are accurate

Mitigation: Purchasing Incentives

- Customers discounts on .SYNC clothing items with purchase of the tech
- Free companion app that comes with purchase

Mitigation: Prioritize High Quality

- Using only high quality materials, so consumers do not have to constantly repurchase the clothing items.
- Our tech has no screens, only sensors ensuring more durability

Mitigation: Modern Technology

- Making sure that all of the bluetooth sensors, GPS monitors, etc, are updated by manufacturing using the most advanced product possible.

Success Factors

Marketing + Campaign Strategy

- Traditional Marketing
- Digital campaigns
 - influencers/celebrities
- Consumer pop-up experiences

Testing

- Increased testing of target audience
- Impressions of MVP
- Testing outside the lab

Financing

- Produce marketing campaigns
- Manufacture the .SYNC Clothing
- Research + develop sensors in the .SYNC device
- App development

Manufacturing

- Comfortable, durable .SYNC clothing
- .SYNC device
- .SYNC app
- Overall research

Thank You
