

REDEFINING WEARABLE WELLNESS

Team 3: Alice, Brandon, Julia, Menna, Yana

Lets talk about it!

Fitbit is a leading health and fitness brand that creates wearable fitness technology to help people track sleep, steps, heart rate and more.

Fitbits Mission is to empower and inspire you to live a healthier, more active life!

THE MARKET BEHIND THE BRAND

Health and fitness device market

Why this market segment?

Rising product adoption of wearable fitness devices

High adoption rate for new market technologies

Clear concerns given by early market research

Realistic connection between brands current products

Opportunities

Current gap in market

Creation of niche product in common market space

Increase engagement in Fitbits declining community

Potential for high customer loyalty

Our Market Demographic

College students aged 18-25

Looking for convenient, light weight and non intrusive methods

Product other than a “fitness watch” or fitness device

Easily integrated into their already daily routines

Meet, Cole Smith

College athlete at The University of Rochester

Age: 22

Gender: Male

Bio

Cole is a senior studying business and is a member of the soccer team.

He also enjoys lifting weights and running.

Lifestyle

Cole lives an active lifestyle while also valuing time spent with friends.

He takes his athletics very seriously.

Goals

Understand current athletic levels

Share his performance metrics with friends

Find something affordable

Challenges

Device that can be worn while sleeping and during games

Fitness community where people motivate each other

App that holds all his athletic data accurately

Meet, Maya Harris

College student at The University of Rochester

Age: 20

Gender: Female

Bio

Maya is a sophomore studying biomedical engineering.

She's on the executive board for Medcouncil and participates in club fieldhockey

Lifestyle

In her free time she enjoys going on walk.

She values flexibility, low cost and tech savvy solutions to track her overall health and wellbeing

Goals

Convenient ways to track sleep, stress & anxiety

Find a device that's customizable for everyday wear

Track field hockey performance

Challenges

Hates wearing an athletic watch, interferes with play and studying

Can't find a device catered to her current needs

Finding a low cost solution

People want to be healthy, but require ease of use

Target segment desires what fitness technology can provide

BUT, fitness technology as a whole has too many roadblocks

So, we are making it easy for them by

Changing how fitness technology is worn

Beginner friendly

Automatic

We plan to answer the needs of the consumer

WHAT WE LEARNED THROUGH OUR BMC

FITCHIP

**Redefining Wearable
Wellness**

Rechargeable chip

Tracks health and fitness
metrics through chip with patch

Connects to Fitbit app

Patch weightless, waterproof, small

Customizable by size, color, and design

WHERE FITBIT SETS A NEW STANDARD

	FitBit FitChip	Applewatch	Whoop Band	Aura Ring
\$	\$95USD chip + \$5.99 monthly for 30 patches	\$549USD	\$239USD/ year	\$349USD for ring + \$6.99 monthly
Week Long Battery Life	✓	✗	✗	✗
Discreet / no screen	✓	✗	✓	✓
Light weight tech	✓	✗	✗	✓

HYPOTHESIS 1

We believe that college students prefer to wear a thin, athletic tape-like daily patch for fitness tracking

Why is this critical?

Foundation of consistent use that blends with daily life

watch design does not satisfy consumers anymore

Insights/Actions

73.8% voted “agree” and “strongly agree” for everyday wear

60% voted “agree” and “strongly agree” for preference over a watch

Test Results

Validated if $\geq 60\%$

N=65

Validated

HYPOTHESIS 2

We believe that mental health / personal wellbeing tracking is more important than athletic tracking to all students

Why is this critical?

**Expands on the focus
beyond athletic feature**

**Where the device should
focus on**

Insights/Actions

**41.9% voted “disagree”
& “strongly disagree”
and 41.9% also
selected “neutral”**

Test Results

Validated if $\geq 60\%$

N=62

Invalidated

HYPOTHESIS 3

We believe that users enjoy customizable features when it comes to products because of personal wants and needs.

Why is this critical?

Reflects on personal needs, and improves user experience

allows for personalization of consumer wants & needs

Insights/Actions

75.8% either selected “agree” or “strongly agree” for preference of customizable features

Test Results

Validated if $\geq 60\%$

N = 62

Validated

RISKS & MITIGATIONS

1. Monthly patch retention is not guaranteed

Evidence from data:

53.2% said they would purchase a monthly patch pack (good but not overwhelming).

2. Comfort is not universally a problem

Evidence from data:

survey responses around “fitness watches are uncomfortable” were mixed or negative.

3. Customization demand creates operational complexity

Why it's a risk:

offering too many styles early increases cost, SKU complexity, and supply-chain risk.

WHAT WE NEED FROM FITBIT FOR A SUCCESSFUL LAUNCH

1. Product development & R&D support
2. Budget & manufacturing resources
3. Sales & retail support
4. Marketing & launch platform access
5. Software & app integration
6. Cross-functional launch coordination
7. Customer support & training

Thank you!
QUESTIONS?

APPENDIX

Hypothesis 1

When considering a "Patch" would something thin like athletic tape be a good option for everyday wear? Think materials like "KT Tape"

65 responses

Would a small bandage sized patch that could be placed at any pulse point on your body influence you to purchase over another fitness device?

65 responses

Hypothesis 2

Please rate how much you agree/disagree with this statement:
Mental health tracking/metrics are more important to me than athletic tracking/metrics.

62 responses

Sleep and recovery tracking/metrics are more important to me than athletic tracking/metrics.

65 responses

Hypothesis 3

Please rate how much you agree/disagree with this statement:

I tend to prefer products with customizable features.

62 responses
