What our product addresses and where it stands

Business Model Canvas & Success Factors

Our Hypotheses & Conclusion

Chosen Market

Language Learners

- consists of individuals actively learning new languages
 - includes students, travelers or multilingual professionals
- motivated by curiosity or career goals but often struggle to maintain consistent practice and find engaging, practical tools.

Customer Profiles & Personas

User Research

- Our target users are language learners and individuals who engage with multiple languages in everyday settings
- Survey data shows that 56% are casual learners
- 36% use multiple languages with friends or family, suggesting that informal and social use cases dominate.

Pains & Gains

Pains:

- Existing apps feel repetitive
- Struggle to find motivation & time
- Embarrassment when speaking with native speakers

Gains:

- Build confidence
- Quick access to accurate translations

Jobs

Functional:

- Translate text or speech accurately, learn vocabulary

Emotional:

- Gain confidence, reduce fear, feel accomplished

Social:

- Engage in meaningful conversations, share progress

Persona #1: College Students

- learning new languages for classes or personal growth
- quick translations and gamified lessons

Persona #2: Casual Language Learner

- learning as a hobby or to enhance travel experiences
- appreciates real time translation, and personalization

Persona #3: International Individuals

- living or working abroad who need consistent translation support
- prioritize accuracy and context in communication tools

Value Proposition & New Offer Positioning

Value Map

Product

Translation and language learning app

Pain Relievers

Fun games encourage learning

Community to connect language learners and native speakers

Gain Creators

Quality, personalized lessons build skills and confidence

High accuracy

Convenient

Value Proposition

A game based app that combines high quality translation, community, and comprehensive language learning

Positioning

Business Model Canvas

Our Hypotheses & Conclusion

Hypothesis 1:

People would rather use one comprehensive app instead of multiple apps to address multilingual communication needs.

Why is this critical ?

This will determine whether users prefer one app for their language needs instead of multiple apps, which would validate a clear market demand.

To Test This...

We conducted a survey where students were asked about their preferences in app usage (one comprehensive app vs. multiple apps)

Hypothesis would be validated if at least 70% of users choose to use just one app

Results:

More than 80% of survey respondents chose to use one app for their language needs

Would you prefer to use separate apps for translation and language learning, or one app for both?

51 responses

- Separate apps for translation and language learning
- One app for both

Moving forward...

1. Support For a Unified System (focusing on one app)

- Tools for rollout (Beta testing platform, iOS/Android app deployment)
- Internal tools (feedback collection, update and bug fixes team)

2. Access to Sales & Campus Outreach Specialists

- Campus Ambassadors: Demonstrate the app and gather student feedback
- Sales Specialists: Pitch the app to universities and secure partnerships

Hypothesis 2:

Users prefer language learning apps with gamified features such as mini-games, streaks, and scores.

Why is this critical ?

Gamified features increase user engagement, motivation, and consistency — helping us retain users and make learning more enjoyable.

How did we test?

We surveyed users to rate their preference for gamified features on a scale of 1–5.

The results?

The majority of respondents (68.6%) rated their preference as 4 or 5, showing strong support for gamified features.

Moving forward...

Incorporate gamification into the app design — include streak tracking, progress badges, and mini-games to boost user engagement.

Hypothesis 3:

Users would be willing to watch a 30 second ad to access premium features of the app such as bonus lessons, additional quizzes, and additional review

Why is this critical ?

This will confirm whether our ad-based revenue model will successfully work or not

To test this...

We asked a survey question to see if users would watch a 30-second or longer ad in exchange to unlock premium features. Hypothesis would be valid if at least 60% of would be willing to watch a 30-second ad.

The results?

63.1% of users are willing to watch a 30 second or longer ad

What is the maximum length of ad you would be willing to watch to access premium features (bonus lessons, additional quizzes, and additional review etc.) of a language learning app??

38 responses

Moving forward...

We will implement this ad-based revenue model for users to to unlock bonus lessons and quizzes, and we will test ad frequency limits to maintain user satisfaction

Critical Risks

Competition & Market Saturation

- Strong competitors dominate the space

- Differentiate with unique features
- Focus on specific user segments

Poor Translation Accuracy

- Machine translation errors

Mitigations

- Use AI translation with human or community review
- Prioritize context-based translation over word-for-word

Low User Engagement

- Users try the app but don't stick around

- Personalize learning
 - Gamify progress
 - Push notifications

Success Factors

Marketing & Campus Partnership Support

- Microsoft marketing support for campus promotions and ambassador programs.
- Builds early student awareness and credibility.

Budget & Technical Resources

- Budget for development and integration.
- Access to Microsoft AI tools and developer support.

Thank You
